Assignment #5 – Chrome Browser Extension

Note: To turn in this assignment, create one or more zip files of your extensions and e-mail them to me.

1. Create a Chrome browser extension that lists all *external* links when the user clicks on the extension icon. In order to consider only external links, you can ignore links with URLS that begin with a "/". The links should be displayed in a modal that appears on the page. An example modal can be seen here:
   https://www.w3schools.com/howto/howto_css_modals.asp

2. (More to come…)
